

Summary Prospectus | June 4, 2018, as supplemented June 14, 2018

Xtrackers MSCI China A Inclusion Equity ETF

Ticker: ASHX

Stock Exchange: NYSE Arca, Inc.

Before you invest, you may wish to review the Fund’s prospectus, which contains more information about the Fund and its risks. You can find the Fund’s prospectus and other information about the Fund online at <https://etfus.deutscheam.com/US/EN/Resources/Prospectuses-And-Reports>. You can also get this information at no cost by calling ALPS Distributors, Inc. at 1-855-329-3837 or by sending an e-mail request to dbxquestions@list.db.com. The Fund’s prospectus, dated October 2, 2017, as supplemented from time to time, and statement of additional information, dated June 4, 2018, as supplemented from time to time, are incorporated by reference into this Summary Prospectus.

INVESTMENT OBJECTIVE

The Xtrackers MSCI China A Inclusion Equity ETF (the “Fund”) seeks investment results that correspond generally to the performance, before fees and expenses, of the MSCI China A Inclusion Index (the “Underlying Index”).

FEES AND EXPENSES

These are the fees and expenses that you will pay when you buy and hold shares. You will also incur usual and customary brokerage commissions when buying or selling shares of the Fund, which are not reflected in the Example that follows:

ANNUAL FUND OPERATING EXPENSES

(expenses that you pay each year as a % of the value of your investment)

Management Fee*	0.60
Other Expenses	None
Total Annual Fund Operating Expenses	0.60

* Effective June 1, 2018, the Fund’s management fee was reduced from 0.70% to 0.60% of the Fund’s average daily net assets.

EXAMPLE

This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds. The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$61	\$192	\$335	\$750

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may mean higher taxes if you

are investing in a taxable account. These costs are not reflected in annual fund operating expenses or in the expense example and can affect the Fund’s performance. For the fiscal period ended November 30, 2017, the Fund’s portfolio turnover rate was 1% when the Fund was tracking its prior underlying index.

PRINCIPAL INVESTMENT STRATEGIES

The Fund, using a “passive” or indexing investment approach, seeks investment results that correspond generally to the performance, before fees and expenses, of the Underlying Index, which is designed to track the equity market performance of China A-Shares that are accessible through the Shanghai-Hong Kong Stock Connect program (“Shanghai Connect”) or the Shenzhen-Hong Kong Stock Connect program (“Shenzhen Connect,” and together with Shanghai Connect, “Stock Connect”). “A-Shares” are equity securities issued by companies incorporated in mainland China and are denominated in renminbi (“RMB”). Certain eligible A-Shares are traded on the Shanghai Stock Exchange (“SSE”) or Shenzhen Stock Exchange (“SZSE”). The Underlying Index is designed to track the inclusion of A-Shares in the MSCI Emerging Markets Index over time and is constructed by MSCI, Inc. (the “Index Provider” or “MSCI”) by applying eligibility criteria for the MSCI Global Investable Market Indexes (“GIMI”), and then excluding mid- and small-capitalization A-Shares (as determined by MSCI), A-Shares suspended for trading for more than 50 days in the past 12 months and A-Shares that are not accessible through Stock Connect. The Underlying Index is weighted by each issuer’s free float-adjusted market capitalization (*i.e.*, includes only shares that are readily available for trading in the market) available to foreign investors and includes only large-capitalization companies, as determined by MSCI. The Fund intends to invest in A-Shares included in the Underlying Index primarily through Stock Connect. Stock Connect is a securities trading and clearing program with an aim to achieve mutual stock market access between the People’s Republic of China (“China” or the “PRC”) and Hong Kong. Stock Connect

was developed by Hong Kong Exchanges and Clearing Limited, the SSE (in the case of Shanghai Connect) or the SZSE (in the case of Shenzhen Connect), and China Securities Depository and Clearing Corporation Limited (“CSDCC”). Under Stock Connect, the Fund’s trading of eligible A-Shares listed on the SSE or the SZSE, as applicable, would be effectuated through DBX Advisors LLC (the “Adviser”). Trading through Stock Connect is subject to a daily quota (the “Daily Quota”), which limits the maximum net purchases under Stock Connect each day, and as such, buy orders for A-Shares would be rejected once the Daily Quota is exceeded (although the Fund will be permitted to sell A-Shares regardless of the Daily Quota balance). The Daily Quota is not specific to the Fund, but to all investors investing through the Stock Connect. From time to time, other stock exchanges in China may participate in Stock Connect, and A-Shares listed and traded on such other stock exchanges and accessible through Stock Connect may be added to the Underlying Index, as determined by MSCI.

Under current regulations in China, foreign investors can also invest in the PRC’s domestic securities markets through certain market-access programs. These programs include the Qualified Foreign Institutional Investor (“QFII”) program and the Renminbi Qualified Foreign Institutional Investor (“RQFII”) program, where investors will be required to obtain a license from the China Securities Regulatory Commission (“CSRC”) in order to participate in these programs. QFII and RQFII investors will also be granted a specific aggregate dollar amount of investment quota by China’s State Administration of Foreign Exchange (“SAFE”) to invest foreign freely convertible currencies (in the case of a QFII) and RMB (in the case of an RQFII) in the PRC for the purpose of investing in the PRC’s domestic securities markets.

The Fund intends to invest directly in A-Shares through Stock Connect, but, in the future, may also utilize an RQFII quota applied for by and granted to the Adviser and/or a sub-adviser subsequently appointed for the Fund. In the event the Adviser obtains an RQFII quota, or appoints a sub-adviser that has such quota, under certain circumstances, including when the Fund’s ability to invest in A-Shares through Stock Connect is restricted as a result of the Daily Quota or otherwise, the Adviser and/or a sub-adviser, on behalf of the Fund, may invest in A-Shares and other permitted China securities listed on the SSE and SZSE up to the specified quota amount. The Adviser and/or a sub-adviser may apply for an increase of the initial RQFII quota subject to certain conditions, including the use of all or substantially all of the initial quota. There is no guarantee that an application for additional quota will be granted. Accordingly, the Fund’s direct investments in A-Shares will

be limited by the Daily Quota of Stock Connect and by the quota allocated to the RQFII or QFII. Investment companies are not currently within the types of entities that are eligible for an RQFII or QFII license.

The Adviser expects to use a full replication indexing strategy to seek to track the Underlying Index. As such, the Adviser expects to invest directly in the component securities (or a substantial number of the component securities) of the Underlying Index in substantially the same weightings in which they are represented in the Underlying Index. If it is not possible for the Adviser to acquire component securities due to limited availability or regulatory restrictions, the Adviser may use a representative sampling indexing strategy to seek to track the Underlying Index instead of a full replication indexing strategy. “Representative sampling” is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to the Underlying Index. The securities selected are expected to have, in the aggregate, investment characteristics (based on factors such as market capitalization and industry weightings), fundamental characteristics (such as return variability and yield), and liquidity measures similar to those of the Underlying Index. The Fund may or may not hold all of the securities in the Underlying Index when the Adviser is using a representative sampling indexing strategy.

The Fund will normally invest at least 80% of its total assets in securities (including depository receipts in respect of such securities) of issuers that comprise the Underlying Index. The Fund will seek to achieve its investment objective by primarily investing directly in A-Shares. Because the Fund does not satisfy the criteria to qualify as an RQFII or QFII itself, the Fund intends to invest directly in A-Shares via Stock Connect and, in the future, may also utilize any A-Share quota applied for by and granted to the Adviser and/or a sub-adviser. While the Fund intends to invest primarily and directly in A-Shares, the Fund also may invest in securities of issuers not included in the Underlying Index, futures contracts, swap contracts and other types of derivative instruments, and other pooled investment vehicles, including exchange-traded funds (“ETFs”), whether or not managed by the Adviser, as well as foreign investment companies, that the Adviser believes will help the Fund to achieve its investment objective. The remainder of the Fund’s assets will be invested primarily in money market instruments and cash equivalents. Under normal circumstances, the Fund invests at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in A-Shares of Chinese issuers or in derivative instruments and other securities that provide investment exposure to A-Shares of Chinese issuers.

As of April 30, 2018, the Underlying Index consisted of 232 securities with an average market capitalization of approximately \$3.72 billion and a minimum market capitalization of approximately \$697.53 million. The Underlying Index is rebalanced quarterly in February, May, August and November, and thus the Fund rebalances its portfolio in a corresponding fashion.

The Fund is classified as a non-diversified fund under the Investment Company Act of 1940, as amended (the "1940 Act"). The Fund will concentrate its investments (i.e., hold 25% or more of its total assets) in a particular industry or group of industries to the extent that the Underlying Index is concentrated. As of April 30, 2018, a significant percentage of the Underlying Index was comprised of issuers in the financial services sector (33.9%).

Prior to June 4, 2018, the Fund sought investment results that correspond generally to the performance, before the Fund's fees and expenses, of the CSI 300 USD Hedged Index.

MAIN RISKS

As with any investment, you could lose all or part of your investment in the Fund, and the Fund's performance could trail that of other investments. The Fund is subject to the main risks noted below, any of which may adversely affect the Fund's net asset value ("NAV"), trading price, yield, total return, and ability to meet its investment objective, as well as numerous other risks that are described in greater detail in the section of this Prospectus entitled "Additional Information About the Fund's Investment Strategies, Underlying Index and Risks – Further Discussion of Main Risks" and in the Statement of Additional Information ("SAI").

Stock market risk. When stock prices fall, you should expect the value of your investment to fall as well. Stock prices can be hurt by poor management on the part of the stock's issuer, shrinking product demand and other business risks. These may affect single companies as well as groups of companies. In addition, movements in financial markets may adversely affect a stock's price, regardless of how well the company performs. The market as a whole may not favor the types of investments the Fund makes, which could affect the Fund's ability to sell them at an attractive price. To the extent the Fund invests in a particular capitalization or sector, the Fund's performance may be affected by the general performance of that particular capitalization or sector.

Special risk considerations relating to investments in A-Shares. The Adviser's ability to achieve its investment objective by investing in the component securities of the Underlying Index is dependent on the continuous availability of A-Shares. The Fund intends to invest directly

in A-Shares through Stock Connect, but, in the future, may also utilize an RQFII quota applied for by and granted to the Adviser and/or a sub-adviser. Because the Fund will not be able to invest directly in A-Shares beyond the Daily Quota to which Stock Connect is subject and in excess of any RQFII quota obtained by the Adviser and/or a sub-adviser, the size of the Fund's direct investment in A-Shares may be limited. If the Daily Quota and/or RQFII quota is or becomes inadequate to meet the investment needs of the Fund or if the Adviser and/or sub-adviser becomes unable to maintain its RQFII status, the Adviser may seek to gain exposure to the A-Share market by investing in securities not included in the Underlying Index, futures contracts, swaps and other derivative instruments, and other pooled investment vehicles, including foreign and/or affiliated funds, that provide exposure to the A-Share market until the Daily Quota accommodates the Fund's investment needs and/or additional RQFII quota can be obtained. A reduction in or elimination of the RQFII quota, or constraints of the Daily Quota, may not only adversely affect the ability of the Fund to invest directly in A-Shares, but also the willingness of swap counterparties to engage in swaps and the performance of pooled investment vehicles linked to the performance of A-Shares. Therefore, any such reduction or elimination of the RQFII quota or the constraints of the Daily Quota may have a material adverse effect on the ability of the Fund to achieve its investment objective. These risks are compounded by the fact that at present there are only a limited number of firms and counterparties that have QFII or RQFII status or are otherwise able to obtain a QFII or RQFII quota. In addition, an RQFII quota may be reduced or revoked by Chinese regulators if, among other things, the Adviser and/or a sub-adviser fails to observe SAFE and other applicable Chinese regulations, which could also lead to other adverse consequences, including the requirement that the Fund dispose of its A-Shares holdings. There can be no guarantee that the Fund will be able to invest in appropriate futures contracts, swaps and other derivative instruments, and the PRC government may at times restrict the ability of firms regulated in the PRC to make such instruments available. In addition, there are custody risks associated with investing through an RQFII, where, due to requirements regarding establishing a custody account in the joint names of the Fund and the Adviser, the Fund's assets may not be as well protected from the claims of the Adviser's creditors than if the Fund had an account in its name only.

If the Fund is unable to obtain sufficient exposure to the performance of the Underlying Index due to the limited availability of the Daily Quota, an RQFII quota or other investments that provide exposure to the performance of A-Shares, the Fund could, among other actions, limit or

suspend creations until the Adviser determines that the requisite exposure to the Underlying Index is obtainable. During the period that creations are limited or suspended, the Fund could trade at a significant premium or discount to the NAV and could experience substantial redemptions. Alternatively, the Fund could change its investment objective by, for example, seeking to track an alternative index that does not include A-Shares as its component securities, or decide to liquidate the Fund.

Risks of investing through Stock Connect. Trading through Stock Connect is subject to a number of restrictions that may affect the Fund's investments and returns. For example, trading through Stock Connect is subject to the Daily Quota, which may restrict or preclude the Fund's ability to invest in A-Shares through Stock Connect ("Stock Connect A-Shares"). In addition, investments made through Stock Connect are subject to trading, clearance and settlement procedures that are relatively untested in the PRC, which could pose risks to the Fund. Moreover, Stock Connect A-Shares generally may not be sold, purchased or otherwise transferred other than through Stock Connect in accordance with applicable rules. A primary feature of Stock Connect is the application of the home market's laws and rules applicable to investors in A-Shares. Therefore, the Fund's investments in Stock Connect A-Shares are generally subject to PRC securities regulations and listing rules, among other restrictions. Finally, while foreign investors currently are exempted from paying capital gains or value-added taxes on income and gains from investments in Stock Connect A-Shares, these PRC tax rules could be changed, which could result in unexpected tax liabilities for the Fund.

Stock Connect will only operate on days when both the Chinese and Hong Kong markets are open for trading and when banking services are available in both markets on the corresponding settlement days. Therefore, an investment in A-Shares through Stock Connect may subject the Fund to the risk of price fluctuations on days when the Chinese markets are open, but Stock Connect is not trading.

The Stock Connect program is a relatively new program. Further developments are likely and there can be no assurance as to the program's continued existence or whether future developments regarding the program may restrict or adversely affect the Fund's investments or returns. In addition, the application and interpretation of the laws and regulations of Hong Kong and the PRC, and the rules, policies or guidelines published or applied by relevant regulators and exchanges in respect of the Stock Connect program are uncertain, and they may have a detrimental effect on the Fund's investments and returns.

Special risk considerations of investing in China.

Investing in securities of Chinese issuers involves certain risks and considerations not typically associated with

investing in securities of U.S. issuers, including, among others, (i) more frequent (and potentially widespread) trading suspensions and government interventions with respect to Chinese issuers, resulting in lack of liquidity and in price volatility, (ii) currency revaluations and other currency exchange rate fluctuations or blockage, (iii) the nature and extent of intervention by the Chinese government in the Chinese securities markets (including both direct and indirect market stabilization efforts, which may affect valuations of Chinese issuers), whether such intervention will continue and the impact of such intervention or its discontinuation, (iv) the risk of nationalization or expropriation of assets, (v) the risk that the Chinese government may decide not to continue to support economic reform programs, (vi) limitations on the use of brokers (or action by the Chinese government that discourages brokers from serving international clients), (vii) higher rates of inflation, (viii) greater political, economic and social uncertainty, (ix) higher market volatility caused by any potential regional territorial conflicts or natural disasters, (x) the risk of increased trade tariffs, embargoes and other trade limitations, (xi) restrictions on foreign ownership, (xii) custody risks associated with investing through an RQFII or other programs to access the Chinese securities markets, (xiii) both interim and permanent market regulations which may affect the ability of certain stockholders to sell Chinese securities when it would otherwise be advisable, and (xiv) different and less stringent financial reporting standards.

A-Shares tax risk. Uncertainties in the Chinese tax rules governing taxation of income and gains from investments in A-Shares could result in unexpected tax liabilities for the Fund. China generally imposes withholding tax at a rate of 10% on dividends and interest derived by nonresident enterprises (including QFIIs and RQFIIs) from issuers resident in China. China also imposes withholding tax at a rate of 10% on capital gains derived by nonresident enterprises from investments in an issuer resident in China, subject to an exemption or reduction pursuant to domestic law or a double taxation agreement or arrangement.

Since the respective inception of Shanghai Connect and Shenzhen Connect, foreign investors (including the Fund) investing in A-Shares listed on the SSE through Shanghai Connect and the SZSE through Shenzhen Connect would be temporarily exempt from the PRC corporate income tax and value-added tax on the gains on disposal of such A-Shares. Dividends would be subject to PRC corporate income tax on a withholding basis at 10%, unless reduced under a double tax treaty with China upon application to and obtaining approval from the competent tax authority.

The current PRC tax laws and regulations and interpretations thereof may be revised or amended in the future, potentially retroactively, including with respect to the possible liability of the Fund for the taxation of income and gains from investments in A-Shares through Stock Connect or obligations of an RQFII. The withholding taxes on dividends, interest and capital gains may in principle be subject to a reduced rate under an applicable tax treaty, but the application of such treaties in the case of an RQFII acting for a foreign investor such as the Fund is also uncertain. Finally, it is also unclear whether an RQFII would also be eligible for PRC Business Tax ("BT") exemption, which has been granted to QFIIs, with respect to gains derived prior to May 1, 2016. In practice, the BT has not been collected. However, the imposition of such taxes could have a material adverse effect on the Fund's returns. Since May 1, 2016, RQFIIs are exempt from PRC value-added tax, which replaced the BT with respect to gains realized from the disposal of securities, including A-Shares.

The PRC rules for taxation of RQFIIs (and QFIIs) are evolving and certain tax regulations to be issued by the PRC State Administration of Taxation and/or PRC Ministry of Finance to clarify the subject matter may apply retrospectively, even if such rules are adverse to the Fund and its shareholders.

If the PRC begins applying tax rules regarding the taxation of income from A-Shares investments to RQFIIs and/or begins collecting capital gains taxes on such investments (whether made through Stock Connect or an RQFII), the Fund could be subject to withholding tax liability in excess of the amount reserved (if any). The impact of any such tax liability on the Fund's return could be substantial. The Fund will be liable to the Adviser for any Chinese tax that is imposed on the Adviser with respect to the Fund's investments.

As described below under "Taxes – Taxes on Distributions," the Fund may elect, for U.S. federal income tax purposes, to treat Chinese taxes (including withholding taxes) paid by the Fund as paid by its shareholders. Even if the Fund is qualified to make that election and does so, however, your ability to claim a credit for certain Chinese taxes may be limited under general U.S. tax principles.

In addition, to the extent the Fund invests in swaps and other derivative instruments, such investments may be less tax-efficient from a U.S. tax perspective than direct investment in A-Shares and may be subject to special U.S. federal income tax rules that could adversely affect the Fund. Also the Fund may be required to periodically adjust its positions in those instruments to comply with certain regulatory requirements which may further cause these investments to be less efficient than a direct investment in A-Shares.

Should the Chinese government impose restrictions on the Fund's ability to repatriate funds associated with direct investment in A-Shares, the Fund may be unable to satisfy distribution requirements applicable to regulated investment companies ("RICs") under the Internal Revenue Code of 1986, as amended (the "Internal Revenue Code"), and the Fund may therefore be subject to Fund-level U.S. federal taxes.

Depository receipt risk. The Fund may invest in depository receipts which involve similar risks to those associated with investments in securities of Chinese issuers. Depository receipts also may be less liquid than the underlying shares in their primary trading market.

Derivatives risk. Risks associated with derivatives include the risk that the derivative is not well correlated with the security, index or currency to which it relates; the risk that derivatives may result in losses or missed opportunities; the risk that the Fund will be unable to sell the derivative because of an illiquid secondary market; the risk that a counterparty is unwilling or unable to meet its obligation; and the risk that the derivative transaction could expose the Fund to the effects of leverage, which could increase the Fund's exposure to the market and magnify potential losses. There is no guarantee that derivatives, to the extent employed, will have the intended effect, and their use could cause lower returns or even losses to the Fund.

Counterparty risk. A financial institution or other counterparty with whom the Fund does business, or that underwrites, distributes or guarantees any investments or contracts that the Fund owns or is otherwise exposed to, may decline in financial health and become unable to honor its commitments. This could cause losses for the Fund or could delay the return or delivery of collateral or other assets to the Fund.

Currency and repatriation risk. The Underlying Index is calculated in offshore RMB, whereas the Fund's reference currency is the U.S. dollar. As a result, the Fund's return may be adversely affected by currency exchange rates. The value of the U.S. dollar measured against other currencies is influenced by a variety of factors. These factors include: interest rates, national debt levels and trade deficits, changes in balances of payments and trade, domestic and foreign interest and inflation rates, global or regional political, economic or financial events, monetary policies of governments, actual or potential government intervention, global energy prices, political instability and government monetary policies and the buying or selling of currencies by a country's government.

In addition, the Chinese government heavily regulates the domestic exchange of foreign currencies within China. Chinese law requires that all domestic transactions must be settled in RMB, places significant restrictions on the

remittance of foreign currencies, and strictly regulates currency exchange from RMB. There is no assurance that there will always be sufficient amounts of RMB for the Fund to remain fully invested. Repatriations by RQFIs are currently permitted daily and are not subject to repatriation restrictions or prior regulatory approval. However, there is no assurance that Chinese rules and regulations will not change or that repatriation restrictions will not be imposed in the future. Further, such changes to the Chinese rules and regulations may be applied retroactively. Any restrictions on repatriation of the Fund's portfolio investments may have an adverse effect on the Fund's ability to meet redemption requests.

Financial services sector risk. The Fund invests a significant portion of its assets in securities of issuers in the financial services sector in order to track the Underlying Index's allocation to that sector. The financial services sector is subject to extensive government regulation, can be subject to relatively rapid change due to increasingly blurred distinctions between service segments, and can be significantly affected by availability and cost of capital funds, changes in interest rates, the rate of corporate and consumer debt defaults, and price competition. In addition, the deterioration of the credit markets in 2007 and ensuing financial crisis in 2008 resulted, and may continue to result, in an unusually high degree of volatility in the financial markets.

Investing in other investment companies risk. Subject to applicable limitations under the 1940 Act and the conditions of any exemptive relief granted to the Fund, the Fund may invest in other investment companies, including ETFs, whether or not managed by the Adviser. The Fund's investments in other investment companies subject the Fund to the risks affecting those investment companies, including the possibility that the value of the securities held by those investment companies could decrease. In addition, the Fund's shareholders will bear both their proportionate share of expenses in the Fund and indirectly, the expenses of the other investment companies.

Indexing risk. While the exposure of the Underlying Index to its component securities is by definition 100%, the Fund's effective exposure to Underlying Index securities may vary over time. Because the Fund, as an index fund, is designed to maintain a high level of exposure to its Underlying Index at all times, it will not take any steps to invest defensively or otherwise reduce the risk of loss during market downturns.

Pricing risk. If market conditions make it difficult to value some investments (including China A-Shares), the Fund may value these investments using more subjective methods, such as fair value pricing. In such cases, the value determined for an investment could be different than the value realized upon such investment's sale. As a result,

you could pay more than the market value when buying Fund shares or receive less than the market value when selling Fund shares.

Tracking error risk. The performance of the Fund may diverge from that of the Underlying Index for a number of reasons, including operating expenses, transaction costs, cash flows, operational inefficiencies, and the effect of Chinese taxes. The Fund's return also may diverge from the return of the Underlying Index because the Fund bears the costs and risks associated with buying and selling securities (especially when rebalancing the Fund's securities holdings to reflect changes in the Underlying Index) while such costs and risks are not factored into the return of the Underlying Index. The Fund's use of derivatives may also increase the deviation between the Fund's return and that of the Underlying Index. Transaction costs, including brokerage costs, will decrease the Fund's NAV to the extent not offset by the transaction fee payable by an "Authorized Participant" ("AP"). Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the required levels in order to track the Underlying Index. Errors in the Underlying Index data, the Underlying Index computations and/or the construction of the Underlying Index in accordance with its methodology may occur from time and time and may not be identified and corrected by the index provider for a period of time or at all, which may have an adverse impact on the Fund and its shareholders. In addition, the Fund may not be able to invest in certain securities included in the Underlying Index, or invest in them in the exact proportions they represent of the Underlying Index, due to legal restrictions or limitations imposed by the Chinese government, a lack of liquidity on stock exchanges in which such securities trade, potential adverse tax consequences or other regulatory reasons. The performance of the Fund also may diverge from that of the Underlying Index if the Adviser seeks to gain exposure to A-Shares by investing in securities not included in the Underlying Index, derivative instruments, and other pooled investment vehicles because the Stock Connect Daily Quota has been reached, an RQFII quota has become inadequate or the Adviser and/or a sub-adviser is, in the future, unable to maintain its RQFII status. To the extent the Fund calculates its NAV based on fair value prices and the value of the Underlying Index is based on securities' closing prices in the Chinese markets (i.e., the value of the Underlying Index is not based on fair value prices), the Fund's ability to track the Underlying Index may be adversely affected. If the Fund uses a representative sampling approach, it may cause the Fund to not be as well correlated with the return of the Underlying Index as would be the case if the Fund purchased all of the securities in the Underlying Index in the proportions represented in the Underlying Index. For tax efficiency

purposes, the Fund may sell certain securities, and such sale may cause the Fund to realize a loss and deviate from the performance of the Underlying Index. In light of the factors discussed above, the Fund's return may deviate significantly from the return of the Underlying Index.

Market price risk. Fund shares are listed for trading on NYSE Arca and are bought and sold in the secondary market at market prices. The market prices of shares will fluctuate, in some cases materially, in response to changes in the NAV and supply and demand for shares. As a result, the trading prices of shares may deviate significantly from NAV during periods of market volatility. The Adviser cannot predict whether shares will trade above, below or at their NAV. Given the fact that shares can be created and redeemed in Creation Units, the Adviser believes that large discounts or premiums to the NAV of shares should not be sustained in the long-term. However, the Fund may have a limited number of financial institutions that may act as APs or market makers. Only APs who have entered into agreements with the Fund's distributor may engage in creation or redemption transactions directly with the Fund (as described below under "Purchase and Sale of Fund Shares"). If those APs exit the business or are unable to process creation and/or redemption orders (including in situations where APs have limited or diminished access to capital required to post collateral) and no other AP is able to step forward to create and redeem in either of these cases, shares may trade at a discount to NAV like closed-end fund shares (and may even face delisting). Similar effects may result if market makers exit the business or are unable to continue making markets in Fund shares. Further, while the creation/redemption feature is designed to make it likely that shares normally will trade close to the value of the Fund's holdings, disruptions to creations and redemptions, including disruptions at market makers, APs or market participants, or during periods of significant market volatility, may result in market prices that differ significantly from the value of the Fund's holdings. Although market makers will generally take advantage of differences between the NAV and the market price of Fund shares through arbitrage opportunities, there is no guarantee that they will do so. In addition, the securities held by the Fund may be traded in markets that close at a different time than the NYSE Arca. Liquidity in those securities may be reduced after the applicable closing times. Accordingly, during the time when NYSE Arca is open but after the applicable market closing, fixing or settlement times, bid-ask spreads and the resulting premium or discount to the shares' NAV is likely to widen. The bid/ask spread of the Fund may be wider in comparison to the bid/ask spread of other ETFs, due to the Fund's exposure to A-Shares. Further, secondary markets may be subject to irregular trading activity, wide bid-ask spreads and extended trade settlement periods, which

could cause a material decline in the Fund's NAV. The Fund's investment results are measured based upon the daily NAV of the Fund. Investors purchasing and selling shares in the secondary market may not experience investment results consistent with those experienced by those APs creating and redeeming shares directly with the Fund.

Operational risk. The Fund is exposed to operational risk arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third parties, failed or inadequate processes and technology or system failures. The Fund seeks to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate for those risks that they are intended to address.

Non-diversification risk. The Fund is classified as non-diversified under the 1940 Act. This means that the Fund may invest a relatively high percentage of its assets in a limited number of issuers. Therefore, the Fund's performance may be more vulnerable to changes in the market value of a single issuer or group of issuers and more susceptible to risks associated with a single economic, political or regulatory occurrence than a diversified fund.

Cash transactions risk. Unlike most other ETFs, the Fund expects to effect its creations and redemptions principally for cash, rather than in-kind securities. Paying redemption proceeds in cash rather than through in-kind delivery of portfolio securities may require the Fund to dispose of or sell portfolio investments to obtain the cash needed to distribute redemption proceeds at an inopportune time. This may cause the Fund to recognize gains or losses that it might not have incurred if it had made a redemption in-kind. As a result, the Fund may pay out higher or lower annual capital gains distributions than ETFs that redeem in kind. As a practical matter, only institutions and large investors, such as market makers or other large broker-dealers, purchase or redeem Creation Units. Most investors will buy and sell shares of the Fund on an exchange.

Country concentration risk. Because the Fund invests a significant portion of its assets in the securities of a single country, it is more likely to be impacted by events or conditions affecting that country. For example, political and economic conditions and changes in regulatory, tax or economic policy in a country could significantly affect the market in that country and in surrounding or related countries and have a negative impact on the Fund's performance.

PERFORMANCE INFORMATION

The bar chart and table below provide some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year and by showing how the Fund's average annual returns for one year and since inception compare with those of the Underlying Index and a broad measure of market performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Updated performance information is available on the Fund's website at www.Xtrackers.com.

CALENDAR YEAR TOTAL RETURN as of 12/31

The Fund's year-to-date return was -2.89% as of March 31, 2018.

During the period shown in the above chart, the Fund's highest and lowest calendar quarter returns were 5.95% and (14.03)%, respectively, for the quarters ended June 30, 2017 and March 31, 2016.

AVERAGE ANNUAL TOTAL RETURNS

For the periods ended December 31, 2017

	1 Year	Since Inception October 20, 2015
Returns before taxes	21.22%	5.00%
Returns after taxes on distributions	20.16%	1.13%
Returns after taxes on distributions and sale of Fund shares	12.22%	2.25%
CSI 300 USD Hedged Index*	17.04%	2.80%
CSI 300 Index	32.39%	6.88%

* As of the date of this Prospectus, the Fund changed its Underlying Index to the MSCI China A Inclusion Index and reduced its management fee to 0.60% of its average daily net assets

All after-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of any state or local tax. Your own actual after-tax returns will depend on your tax situation and may differ from what is shown here. After-tax returns are not relevant to investors who hold shares of the Fund in tax-deferred accounts such as individual retirement accounts ("IRAs") or employee-sponsored retirement plans.

MANAGEMENT

Investment Adviser

DBX Advisors LLC.

Portfolio Managers

Bryan Richards, Patrick Dwyer, Navid Sohrabi, Shlomo Bassous and Charlotte Cipolletti are portfolio managers for the Fund and are primarily responsible for the day-to-day management of the Fund. Each portfolio manager functions as a member of a portfolio management team. Mr. Richards has been a portfolio manager of the Fund since the Fund's inception. Mr. Dwyer has been a portfolio manager of the Fund since August 2016. Messrs. Sohrabi and Bassous and Ms. Cipolletti have been portfolio managers of the Fund since October 2017.

PURCHASE AND SALE OF FUND SHARES

The Fund is an exchange-traded fund (commonly referred to as an "ETF"). Individual Fund shares may only be purchased and sold through a brokerage firm. The price of Fund shares is based on market price, and because ETF shares trade at market prices rather than NAV, shares may trade at a price greater than NAV (a premium) or less than NAV (a discount). The Fund will only issue or redeem shares that have been aggregated into blocks of 50,000 shares or multiples thereof ("Creation Units") to APs who have entered into agreements with the Fund's distributor.

TAX INFORMATION

The Fund's distributions are generally taxable to you as ordinary income or capital gains, except when your investment is an IRA, 401(k), or other tax-deferred investment plan. Any withdrawals you make from such tax-deferred investment plans, however, may be taxable to you.

PAYMENT TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase shares of the Fund through a broker-dealer or other financial intermediary (such as a bank), the Adviser or other related companies may pay the intermediary for marketing activities and presentations, educational training programs, the support of technology platforms and/or reporting systems or other services related to the sale or promotion of the Fund. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
