Performance quoted represents past performance and does not guarantee future results. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Shares are bought and sold at market price (closing price) not net asset value (NAV) and are not individually redeemed from the Fund. Market price returns are based on the midpoint of the bid/ask spread at 4:00 pm Eastern Time (when NAV is normally determined) and do not represent the return you would receive if you traded at other times. To obtain the most recent month-end performance data visit www.Xtrackers.com or call 855-329-3837.

Indexes are unmanaged; you cannot invest in an index. Index performance is gross of fees and assumes dividend reinvestment. Inclusion of fees would have reduced returns.

Risks:

Investing involves risk, including possible loss of principal. Stocks may decline in value. Bond investments are subject to interest rate, credit, liquidity and market risks to varying degrees. When interest rates rise, bond prices generally fall. Foreign investing involves greater and different risks than investing in U.S. companies, including currency fluctuations, less liquidity, less developed or less efficient trading markets, lack of comprehensive company information, political instability and differing auditing and legal standards. Funds investing in a single industry, country or in a limited geographic region generally are more volatile than more diversified funds. The European financial markets have recently experienced volatility and adverse trends in recent years due to concerns about economic downturns or rising government debt levels in several European countries, including Greece, Ireland, Italy, Portugal and Spain. A default or debt restructuring by any European country would adversely impact holders of that country's debt, and sellers of credit default swaps linked to that country's creditworthiness (which may be located in countries other than those listed in the previous sentence). These events have adversely affected the exchange rate of the euro, the common currency of certain EU countries, and may continue to significantly affect every country in Europe, including countries that do not use the euro. Italy, Portugal and Spain currently have high levels of debt and public spending, which may stifle economic growth, contribute to prolonged periods of recession or lower sovereign debt ratings and adversely impact investments in the Fund. The fund's use of forward currency contracts may not be successful in hedging currency exchange rates changes and could eliminate some or all of the benefit of an increase in the value of a foreign currency versus the U.S. dollar. This fund is non-diversified and can take larger positions in fewer issues, increasing its potential risk. Performance of a Fund may diverge from that of an Underlying Index due to operating expenses, transaction costs, cash flows, use of sampling strategies or operational inefficiencies. There are additional risks associated with investing in high-yield bonds, aggressive growth stocks, non-diversified/concentrated funds and small- and mid-cap stocks which are more fully explained in the prospectuses, as applicable. An investment in any Fund should be considered only as a supplement to a complete investment program for those investors willing to accept the risks associated with that fund. Please read the prospectus for more information. See the prospectus for details.
