

Xtrackers MSCI United Kingdom Hedged Equity ETF (DBUK)

1st quarter 2018

Strategy

Investors may be unaware of a 'hidden risk' to their portfolios—currency exposure—that can significantly impact performance and volatility. To help mitigate the negative effects of currency exposure, consider a currency-hedged exchange-traded fund (ETF) such as the Xtrackers MSCI United Kingdom Hedged Equity ETF (DBUK). DBUK seeks to provide pure and balanced exposure to equities from the United Kingdom and may help investors mitigate the effects of fluctuations between the U.S. dollar and British pound sterling (GBP).

Performance quoted represents past performance and does not guarantee future results. Investment returns and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. Shares are bought and sold at market price (closing price) not net asset value (NAV) and are not individually redeemed from the Fund. Market price returns are based on the midpoint of the bid/ask spread at 4:00 pm Eastern Time (when NAV is normally determined) and do not represent the return you would receive if you traded at other times. To obtain the most recent month-end performance data visit www.Xtrackers.com or call 855-329-3837.

Indexes are unmanaged; you cannot invest in an index. Index performance is gross of fees and assumes dividend reinvestment. Inclusion of fees would have reduced returns.

¹ The 30-Day SEC Yield is based on a 30-day period and is computed by dividing the net investment income per share earned during the period by the maximum offering price per share on the last day of the period.

² Price-to-book ratio is a valuation ratio of a stock's market value compared to its book value.

Risks:

In June 2016, the United Kingdom approved a referendum to leave the EU, creating economic and political uncertainty in its wake. Significant uncertainty exists regarding the timing of the United Kingdom's anticipated withdrawal from the EU and the effects such withdrawal will have on the United Kingdom's economy and on markets in the United Kingdom and throughout the world. Investing involves risk, including the possible loss of principal. Stocks may decline in value. Foreign investing involves greater and different risks than investing in U.S. companies, including currency fluctuations, less liquidity, less developed or less efficient trading markets, lack of comprehensive company information, political instability and differing auditing and legal standards. The fund's use of forward currency contracts may not be successful in hedging currency exchange rates changes and could eliminate some or all of the benefit of an increase in the value of a foreign currency versus the U.S. dollar. Funds investing in a single industry, country or in a limited geographic region generally are more volatile than more diversified funds. Investing in derivatives entails special risks relating to liquidity, leverage and credit that may reduce returns and/or increase volatility. Performance of the Fund may diverge from that of the Underlying Index due to operating expenses, transaction costs, cash flows, use of sampling strategies or operational inefficiencies. An investment in this fund should be considered only as a supplement to a complete investment program for those investors willing to accept the risks associated with the fund. Please read the prospectus for more information. See the prospectus for details.
